

C-ITS Corridor - Workshop on Road Works Warning Service - TPEG + ETSI G5 trial - September 4th, 2015

Dear Sir or Madam,

In context of the initiative of Germany, Austria and the Netherlands to deploy Cooperative ITS in the C-ITS Corridor Rotterdam – Frankfurt/Main – Vienna, we would like to invite you to our workshop on the Road Works Warning Service in Germany on **September 4th, 2015** with a special focus on harmonized Road Works Warning Services via TPEG and ETSI G5.

Purpose of this workshop series is to identify ways to ensure harmonized information flow in order to provide Roadworks Warnings to drivers both via ETSI G5 technology (as a first “day 1” service) and as Traffic Information (TPEG via Digital Broadcast/IP). The aim is to determine appropriate methods and test those within the next C-ITS Corridor testing phase in fall 2015.

In the morning session of this first workshop on **September 4th, 2015**, we will present the purpose and objectives of this trial, and review the architecture of the Road Works Warning service, the interface for TPEG service providers and the content that will be available at this interface via the German Mobility Data Marketplace (MDM).

In the afternoon session, we will aim to prepare for this trial together with workshop participants. We will discuss interests, success factors, relevant test scenarios and technical gaps/challenges, and create a first planning towards the trial.

The workshop will take place at BAST in Bergisch Gladbach from **10:00-15:30, September 4th, 2015**.

If you are interested to join us you are kindly asked to register via mail to office@c-its-korridor.de until 28.08.2015.

Some more background information is attached. General information and documents regarding Architecture, Data Model, and Interface Description can be found on the C-ITS Corridor homepage <http://c-its-korridor.de/> (in German, partly available in English)

Kind regards,
Sandro Berndt, Teun Hendriks
