Disclaimer:

UDRIVE is co-funded by the European Commission, DG Research and Innovation, in the 7th Framework Programme. The contents of this publication is the sole responsibility of the project partners involved in the present activity and do not necessarily represent the view of the European Commission and its services nor of any of the other consortium partners.

Executive Summary

UDRIVE is a large-scale European Naturalistic Driving study that aims to collect in-depth knowledge about the behaviour of car drivers, truck drivers and motor riders in order to make road traffic safer and more environmentally friendly.

Deliverable D63.6 Final project brochure has been produced in a form of three short films instead of a printed brochure as agreed with the project officer. The main goal of the films is to disseminate the project results in an easy way to a broad public via online media such as the project website, social media etc. The three videos are available on the UDRIVE website and under the following links:

Part 1: Introducing UDRIVE: <https://youtu.be/tMxtfkf52Cc>

Part 2: Collected data: <https://youtu.be/Me4gwYMh2KA>

Part 3: Key results: <https://youtu.be/BAxejpzjb0Q>
